

EasyDNNnews 5.0

[User's guide]

www.EasyDNNsolutins.com

May, 2013.

EasyDNNnews is a very powerful DotNetNuke module that enables non-technical users to publish and manage articles, news, press releases, stories and editorials. In addition to publishing text content, adding pictures to articles is easier than ever.

In combination with the EasyDNNgallery and EasyDNNrotator modules, the EasyDNNnews becomes the ultimate publishing platform that easily manages your articles, images, video and audio content.

EasyDNNnews can be used for blogs, news websites, product catalogs, or you can run a complex newspaper website.

1. INTRODUCTION

1.1. About EasyDNNnews module

EasyDNNnews is a very powerful DotNetNuke module that enables non-technical users to publish and manage articles, news, press releases, stories and editorials. In addition to publishing text content, adding pictures to articles is easier than ever. In combination with the EasyDNNgallery and EasyDNNrotator modules, the EasyDNNnews becomes the ultimate publishing platform that easily manages your articles, images, video and audio content.

EasyDNNnews can be used for blogs, news websites, product catalogs, or you can run a complex newspaper website.

1.2. Related products

EasyDNNrotator

EasyDNNrotator is a new DotNetNuke module that rotates content such as images, video and HTML. Besides easy content management and attractive themes, it provides great options to customize **your slider to match your website's design**. This module can display articles from the EasyDNNnews module.

We especially emphasize Chameleon slider, very flexible and unique jQuery slider that we have developed specifically for this module. By setting and studying its options, you can create unique layouts that will perfectly fit your websites and attract the attention of your visitors. With no programming skills required, adjusting the slider has never been easier as now with the EasyDNNrotator module.

EasyDNNgallery

Our well-accepted EasyDNNgallery module has reached its 5.0 edition. Through several versions that preceded this version, we have enabled sharing images through social networks for some layouts, and the most important novelty is the possibility of advanced integration with our newly introduced EasyDNNnews module.

1.3. Licenses

Standard version

Includes the license to use the module on a single domain and all sub-domains. It is allowed to activate the module on the development and production portals.

Professional version

Includes the license to use the module on multiple portals within one DNN installation.

Enterprise version

Includes license to use the module on any number of DNN installations and portals. The right to free upgrades within 1 year from the date of purchase. Enterprise version is especially suited for web design companies because the module can be used for all projects you are working on.

1.4. Customer Support

All questions related to the module usage, error reports and help requests can be send to us via:

- 1) e-mail address support@easyDNNsolutions.com
- 2) via web form on our web page www.easyDNNsolutions.com
- 3) or via support ticket created at Snowcovered.com

We prefer 1 and 2.

In order for us to give you the best possible assistance in the shortest period of time, we recommend you to provide us with detailed information. Please refer to the following recommendations for the information that you can send to us:

- *describe the problem that you are encountering*
- *state the version of our module that you are using*
- *let us know the version of the module that you are using; trial version or production version*
- *let us know which version of DotNetNuke you are using*
- *send us the link of the website on which you are encountering the problem*

All of the above recommended information is not mandatory. Please send us the information that you can provide to us. We will be glad to assist you with any question that you may have and help you with the module use.

2. MODULE INSTALLATION

2.1. Minimum Technical Requirements

In order to install the module, your DotNetNuke portal must meet the following requirements:

The DotNetNuke portal must be version 04.06.02 or higher.

The DotNetNuke portal must be using Microsoft SQL 2005 or higher.

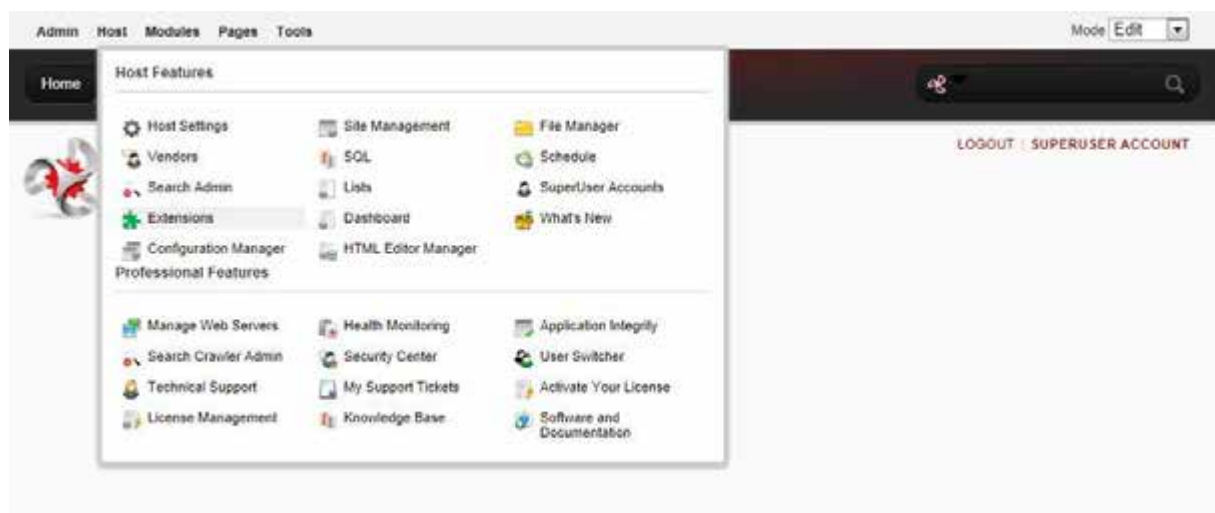

In case you want to integrate EasyDNNgallery with EasyDNNnews module, EasyDNNgallery should be version 4 or above.

2.2. From the trial version to the production version

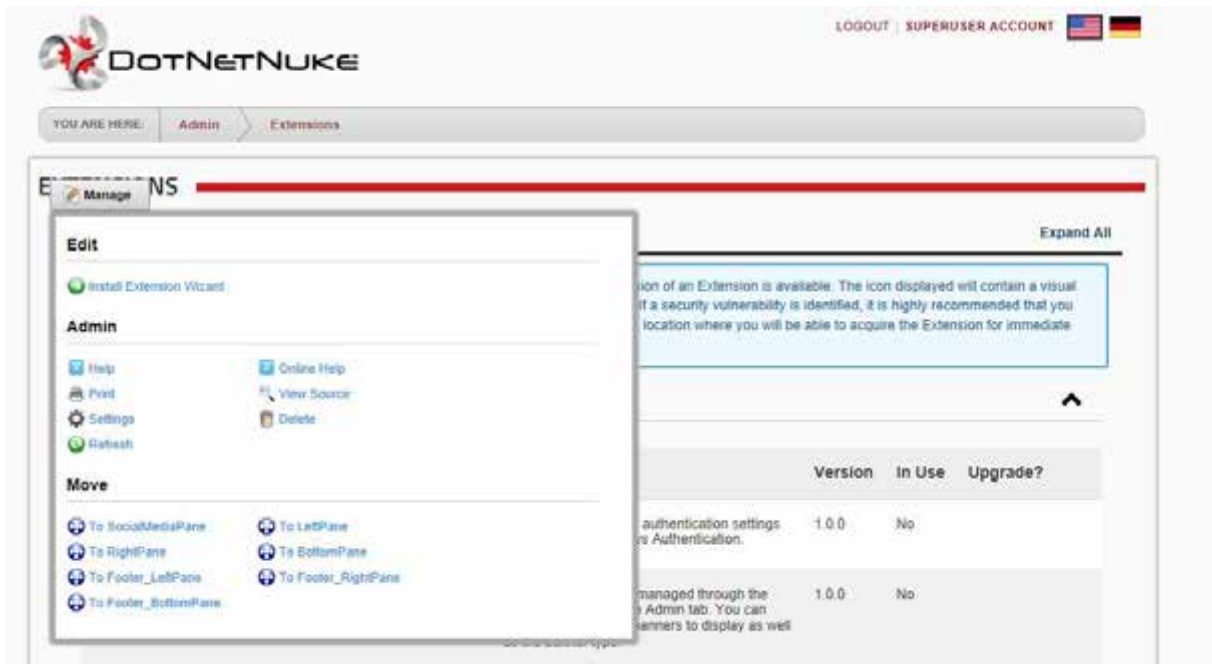

The trial version of the module cannot be activated. If you have installed the trial version of the module, it is possible to install the production version of the module over the trial version from the menu Host> Extensions. All data and settings will be preserved.

2.3. Installing EasyDNNnews module in DotNetNuke 6.x and 7.x

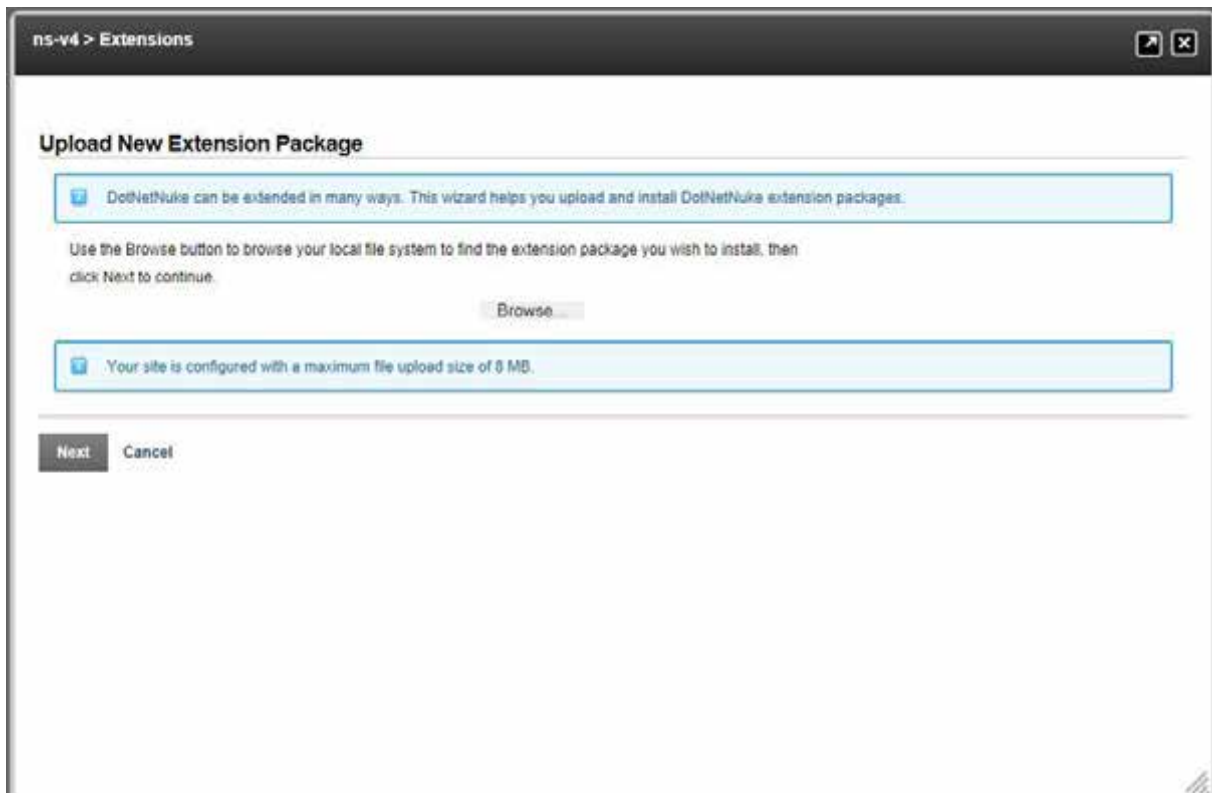

To install the module, login to DotNetNuke as a host. From the Host menu select Extensions button.

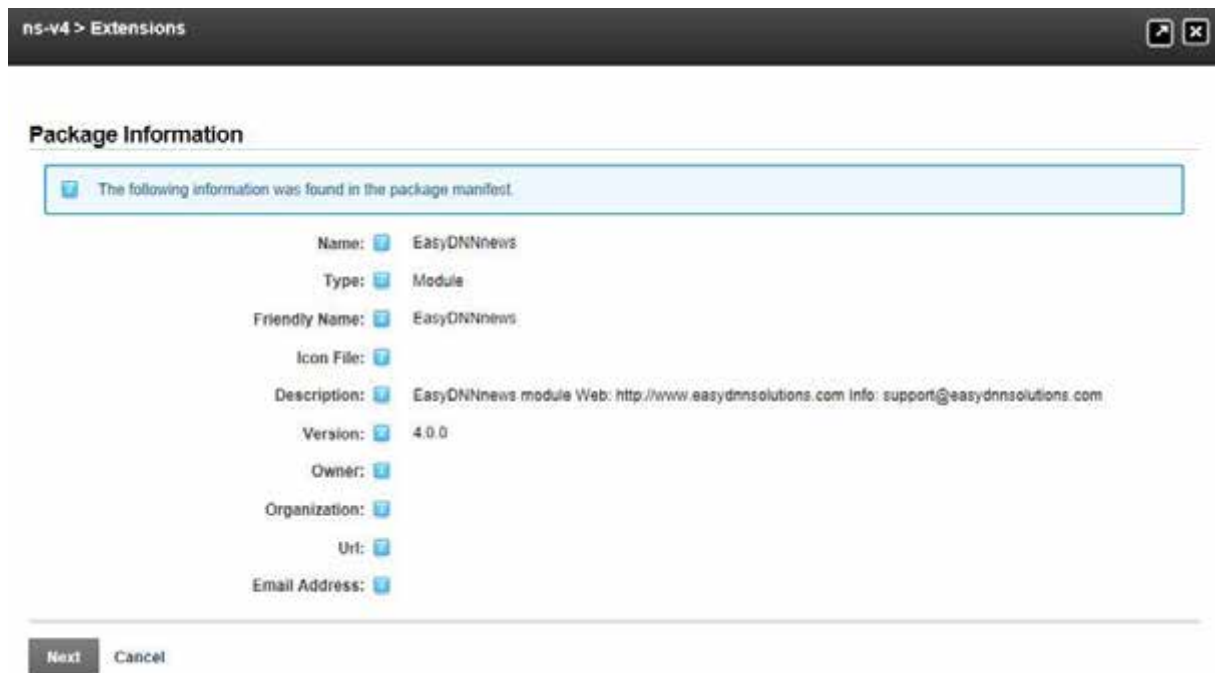

Click on the Manage button and choose the Install Extension Wizard button.

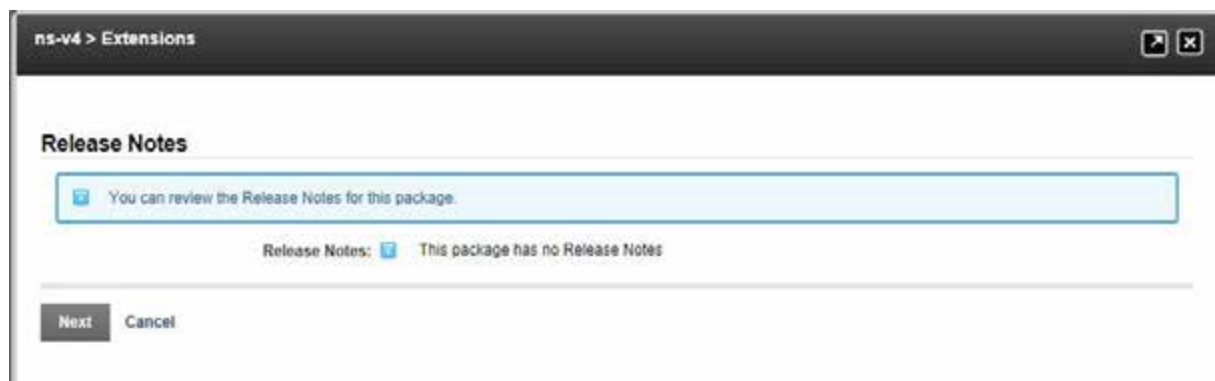

In the next window click the Browse button, locate the installation file on your computer hard disk drive and then click the Next button.

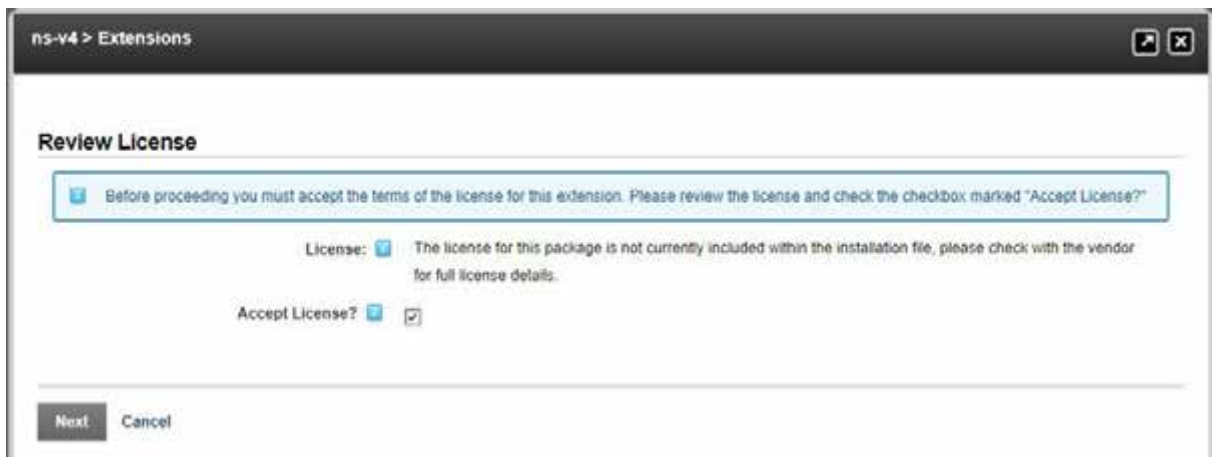

In the next window, click the Next button.

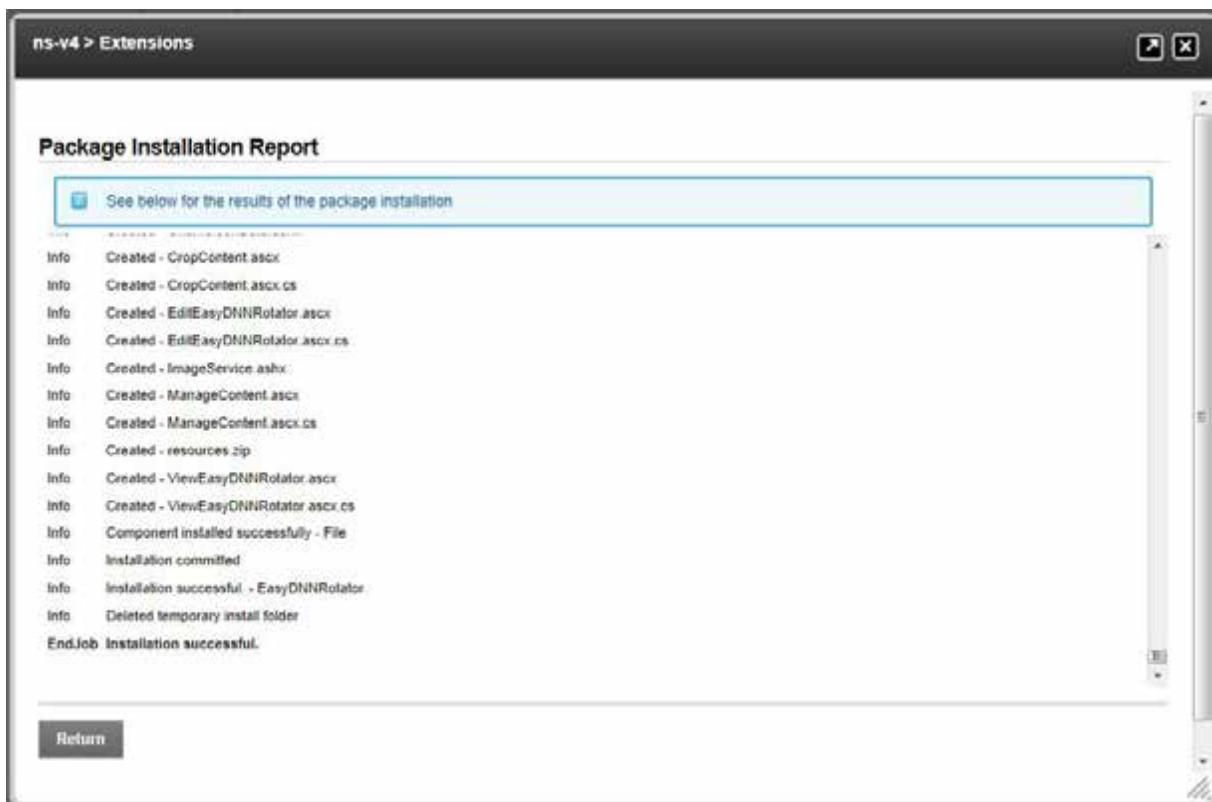

In the next window, click the Next button.

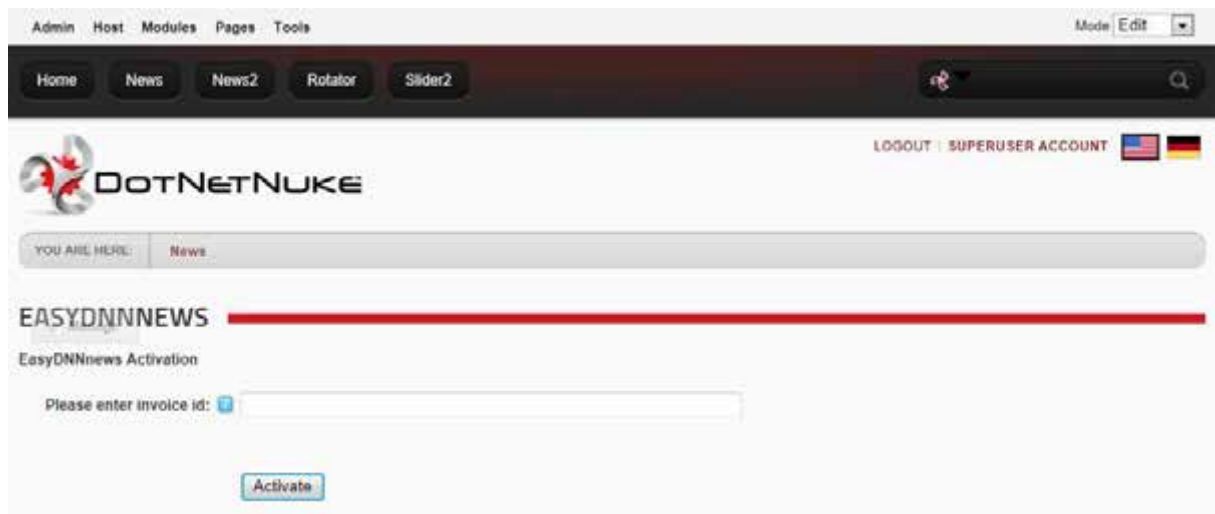

Confirm that you accept the license and click the Next button.

After successful installation of the module, click the Return button.

2.4. Module Activation

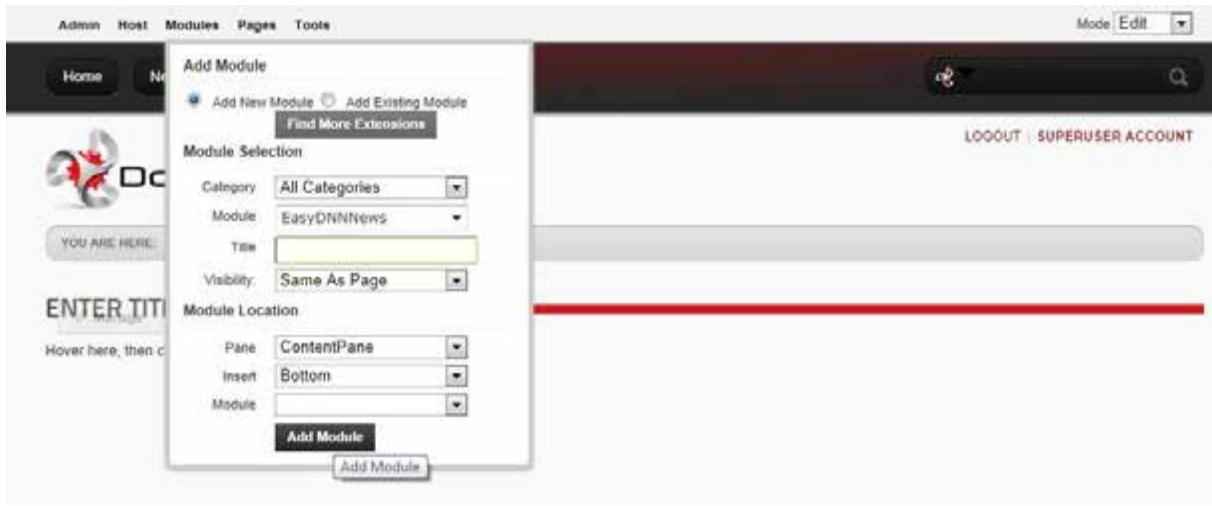

To activate gallery add a new instance of the module to a page and enter the Invoice ID that you received when you purchased EasyDNNgallery at store.dotnetnuke.com.

4. GETTING STARTED

4.1. How to add a Module to a Page

Like all other modules, this module is added to a page from the Modules menu. It is necessary to check the option Add New Module, choose EasyDNNNews from the list of installed modules, and, if necessary, set other options and click the Add module button.

Then click the Start adding article to setup the module for use.

4.2 Adding Articles

After you have added the module on the page, it is possible to click on the Add Article, Dashboard or Settings buttons.

If you click on the link Add Article you will be lead to the form used for adding and editing of the articles.

Due to its length this form is shown on the following two pages.

ADVANCED SETTINGS

Featured article:

Publish date:

Expire date:

Draft Article Publish Article

Title

The title field is used for entering the name of the article.

Subtitle

The subtitle field is used for entering the subtitle of the article. This field is optional.

Seo settings

By clicking on the arrow the panel with SEO article settings will be shown. Three additional setting fields will be shown:

Article url – here it is possible to change the outlook of the human friendly link (optional)

Meta description – enter the meta description here (optional)

Meta keywords – enter the meta keywords here (optional)

Meta description and meta keywords are optional fields.

Categories

Here you can choose the category to which a certain article belongs to. It is necessary to choose at least one category. Articles can be saved in unlimited number of categories and subcategories.

Summary

The Summary field is used for entering a brief summary or description of the article that is going to be shown on the article listing layout. General practice is to use several sentences from the beginning of the article.

Article detail type

Use this option if the article has main content. Article content is edited using the built in HTML editor in DotNetNuke. This option is a default setting.

Page

By clicking Read more or Details in the article list, the user is automatically sent on one of the pages within the website (DNN Portal).

File

By clicking Read more or Details in the article list, the user opens a file within the website (DNN portal).

Link

By clicking Read more or Details in the article list, a given link is opened to the user.

None

Use this option if the main content of the article does not exist.

Main Content

In this field by using the default DNN HTML editor you can edit the main content of the article. HTML editor can be used for text editing, pictures adding, table editing...

Tags

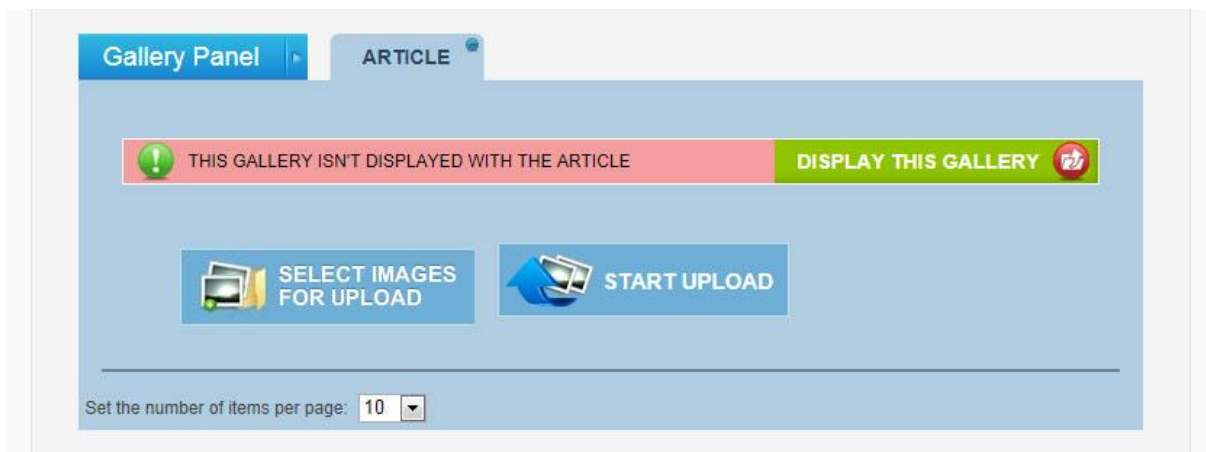

This field is used for the tag entry. (This field is used for entering tags) Tags are separated by using comma. It is as possible to choose from previously added tags.

Gallery Panel

Gallery Panel is used for managing pictures, video and audio files. EasyDNNnews module offers basic possibilities for picture management. If the EasyDNNgallery module is installed on the DNN portal the possibilities are expanded by additional options.

Gallery Panel (without EasyDNNgallery module installed)

Click the Select images button for upload in order to choose one or more pictures from your disc. Afterwards click the Start upload button.

Once the pictures are uploaded, the picture list will be displayed in the Gallery panel.

Action	Title	Description
 Set as article image   		Position   Show  Media 
<code>[EasyDNNGallery10 Width200 Height200 class inline resizecrop False lightbox False title False description False redirection False LinkText]</code>		
 Set as article image   		Position   Show  Media

 Set as article image   		Position   Show  Media 
<code>[EasyDNNGallery17 Width200 Height200 class inline resizecrop False lightbox False title False description False redirection False LinkText]</code>		
 Set as article image   		Position   Show  Media 
<code>[EasyDNNGallery18 Width200 Height200 class inline resizecrop False lightbox False title False description False redirection False LinkText]</code>		

Set the number of items per page: 10 

By clicking on the button Set as main article image placed next to a picture, that picture becomes the main picture of the article. To each picture it is possible to add title and description, it is possible to erase the picture, and change the position in the gallery. It is also possible to determine will the picture be shown in the gallery.

Each picture has its token. It is possible to copy the token in the main content or summary, according to which the picture will be shown instead of the token that was placed somewhere in the text.

Token Example

```
[EasyDNNGallery|43|Width|200|Height|200|class| |inline| |resizecrop|False|lightbox|False|title|False|description|False|redirection|False|LinkText| ]
```

Width – width of the pictures in pixels.

Height - height of the picture in pixels

Class - CSS class that will be applied on the picture

Inline - inline CSS style that will be applied on the picture

Resizecrop – possible values are true and false. This option makes it possible to crop the picture according to the given width and height. If the option is false the picture is being resized proportionally.

Lightbox - possible values are true or false. This option is used for opening the picture in the Lightbox.

Title - possible values are true or false. This option displays the picture title (if the title is available)

Description - possible values are true or false. This option displays the picture description if description exists.

Redirection - possible values are true or false. By clicking on the picture the entered URL for the picture is opened. It is only possible to use this option (true) if the EasyDNNgallery module is installed. It is only possible to set the link for the redirection in the EasyDNNgallery module.

LinkText – text that replaces thumbnail and opens the picture in the lightbox. It is necessary to set lightbox = true.

Default values of tokens can be adjusted in module settings.

Gallery Panel (if the EasyDNNgallery module is installed)

As we have mentioned before, if the EasyDNNgallery is installed on the portal the possibilities for multimedia management expands. In this case, next to the tab Article two additional tabs become visible: Shared and Custom.

Tab Shared is used for storing common images that are commonly used in different articles. It is possible to set images as the Main article image, or with the help of the token they can be added to the main content.

The screenshot shows the 'Galleries included' section with two entries:

- Pizza - History & Legends of Pizza (ArticleId: 4; GalleryID: 5)
- The History of Ice Cream (Category: #News Articles)(ArticleId: 4; GalleryID: ...)

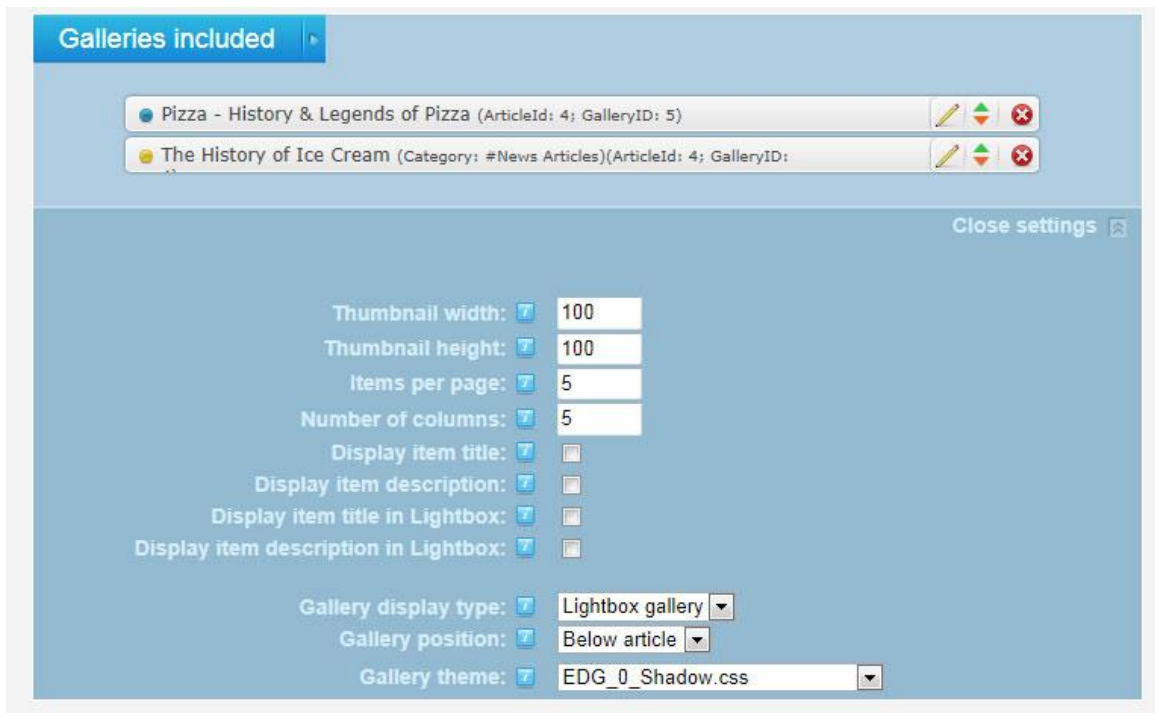

Below this is the 'Gallery Panel' with tabs for 'ARTICLE', 'SHARED', and 'CUSTOM'. The main area displays a table of gallery items with columns for Action, Title, and Description.

Action	Title	Description
Set as article image	[Thumbnail]	[EasyDNNGallery:48 Width:200 Height:200 class: inline resize:crop False lightbox:False title:False description:False redirection:False LinkText:]
Set as article image	[Thumbnail]	[EasyDNNGallery:49 Width:200 Height:200 class: inline resize:crop False lightbox:False title:False description:False redirection:False LinkText:]
Set as article image	[Thumbnail]	[EasyDNNGallery:50 Width:200 Height:200 class: inline resize:crop False lightbox:False title:False description:False redirection:False LinkText:]
Set as article image	[Thumbnail]	[EasyDNNGallery:51 Width:200 Height:200 class: inline resize:crop False lightbox:False title:False description:False redirection:False LinkText:]

Tab Custom enables the usage of EasyDNNgallery module. It is possible to choose for display gallery which is already in EasyDNNgallery module.

The number of galleries that can be added is not limited. Galleries included in the article are shown in the Galleries included panel. Order of galleries can be adjusted by using drag and drop.

If we click on View settings the panel with additional settings will be displayed.

In the additional settings it is possible to adjust the following:

Thumbnail width – sets the thumbnail width

Thumbnail height – sets the thumbnail height

Items per page – sets the number of images per page

Number of columns –sets the number of columns per page.

Display item title – turns on title display under the thumbnail image.

Display item title in Lightbox – turns on title display in Lightbox

Display item description in Lightbox – turns on display in Lightbox.

Gallery display type - selection of the view type (Lightbox gallery, Video gallery, and Audio gallery)

Gallery position – sets the gallery position in relations to the main content. Possible options are Below article and Above article.

Gallery theme - it is possible to choose between different CSS themes from the EasyDNNgallery module.

Available view types from EasyDNNgallery are Lightbox, Video gallery and Audio gallery.

Integration with EasyDNNgallery module enables us to use video and audio files which are already added in EasyDNNgallery module.

Click on the Open Media Manager link will display content management of the EasyDNNgallery module.

By using the token any picture, video, or audio file located in any EasyDNNgallery module gallery can be inserted into the main content.

Documents included

It is possible to publish one or more documents with the article. Document publishing is optional. In order to add documents click the Browse button, choose the file on your disc and click the Upload button.

The screenshot shows a user interface for managing documents. At the top, there is a blue header with the text "DOCUMENTS included". Below this is a form titled "Document uploaded." with three input fields: "Document title:" containing "Things To Do In Us", "Document description:", and "Select a document:" with a "Browse..." button. To the right of the form is a blue "UPLOAD" button with a plus sign. Below the form is a table with the following columns: "Actions", "Title", "Description", "Filename", "Date", and "Author". The table contains one row with the following data: "Actions" (edit and delete icons), "Title" (Things To Do In Us), "Description" (empty), "Filename" (ThingsToDoInUS.pdf), "Date" (11/27/2011 5:42:55 PM), and "Author" (SuperUser Account). To the right of the author name are up and down arrow icons.

Documents added to the article will be displayed in the added documents list. Documents can be edited (Title, Description), removed and the order of documents can be changed.

Advanced settings

Click on the arrow in front of Advance settings and Advanced settings panel will get open.

This panel allows you to change the owner of the article.

The screenshot shows a panel titled "ADVANCED SETTINGS". It contains two sections: "Article Owner:" with a blue lock icon and the text "SuperUser Account", and "Change Owner:" with a blue lock icon, a "Select role" dropdown menu, and a "Select author" dropdown menu.

Featured article

This option allows us to mark article as the Featured article.

Publish date

Sets article publishing date and time.

Expire date

Sets date and time until which the article will be displayed. It is not necessary to change anything, if the article does not have expire date.

Draft Article or Publish Article

Draft Article - article is saved, but it is not approved

Publish Article – article is displayed immediately after being saved.

Save article

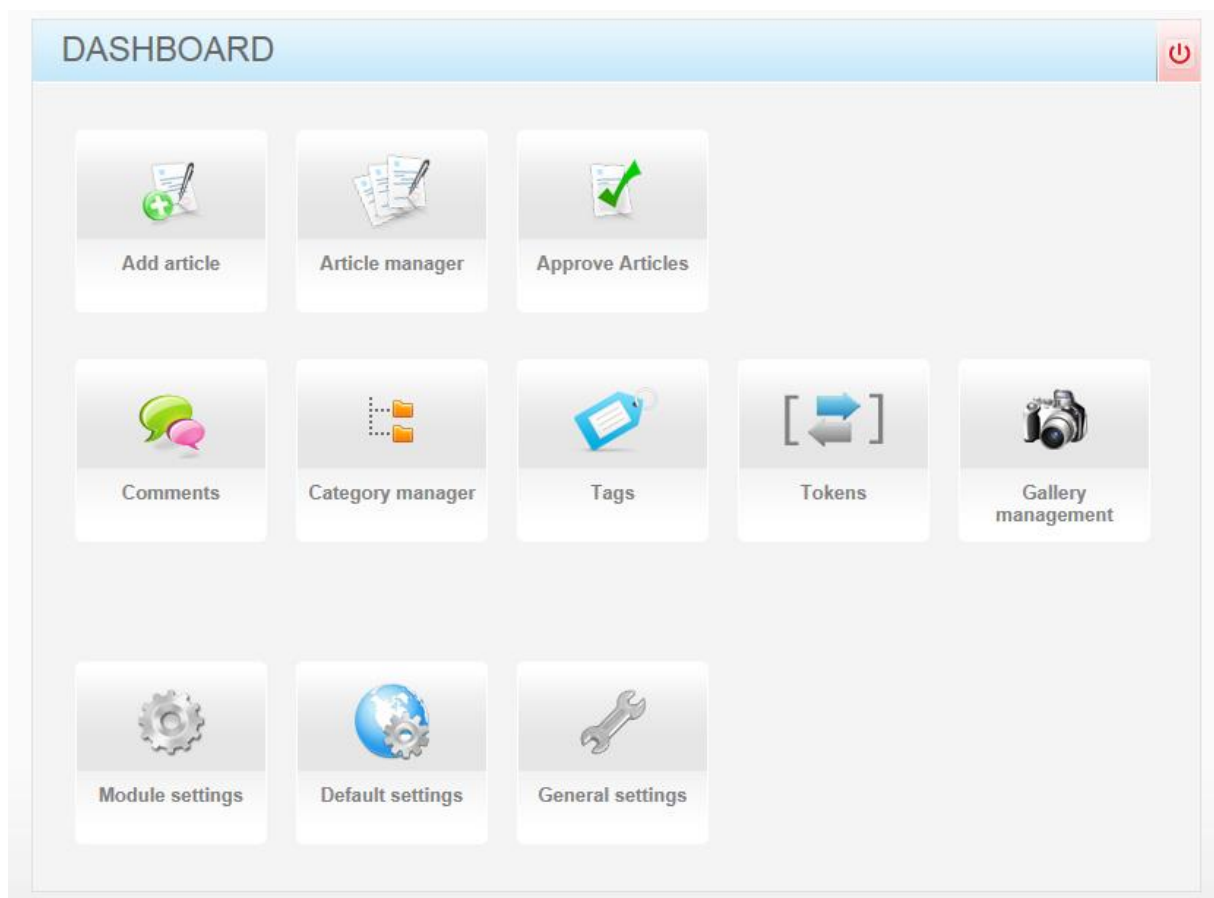

A screenshot of a web interface showing two radio buttons: 'Draft Article' and 'Publish Article'. The 'Publish Article' radio button is selected. Below the radio buttons are two buttons: a red 'Save article' button and a grey 'Cancel' button.

Once the editing of the article is finished, click on the Save article button.

5. MODULE USE AND SETTINGS ADJUSTMENTS

5.1. Dashboard

From the Dashboard you can access all menus, options and settings of module.

Add article – opens the interface for adding new articles

Article manager – opens the interface of Article manager

Approve Articles – displays the list of articles that require approval

Comments – opens the interface for managing comments

Category manager – opens the interface for categories management

Tags – opens the interface for tags management

Tokens – opens the interface for tokens management

Gallery management – opens the EasyDNNgallery content management interface

Module settings – opens the interface for settings adjustment for current module instance

Default settings – opens the interface for adjustment of default module settings

General settings – opens the interface for adjustment of general module settings

Click on the Manage button if you want to access the Dashboard.

5.2 Add article

Already explained in section 4.2.

5.3. Article manager

Select all Unselect all Delete OK

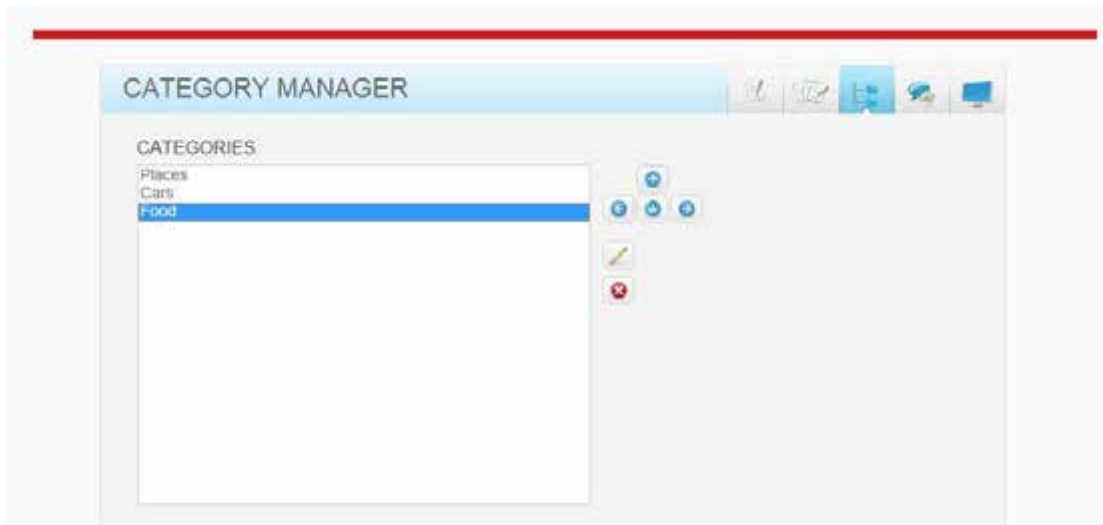

Number of rows: 10

1 2 3 4

This page displays all comments. It is possible to approve, edit or delete comments from here.

Clicking on Show filter settings opens a panel in which you can adjust filtering of displayed comments.

5.6. Category manager

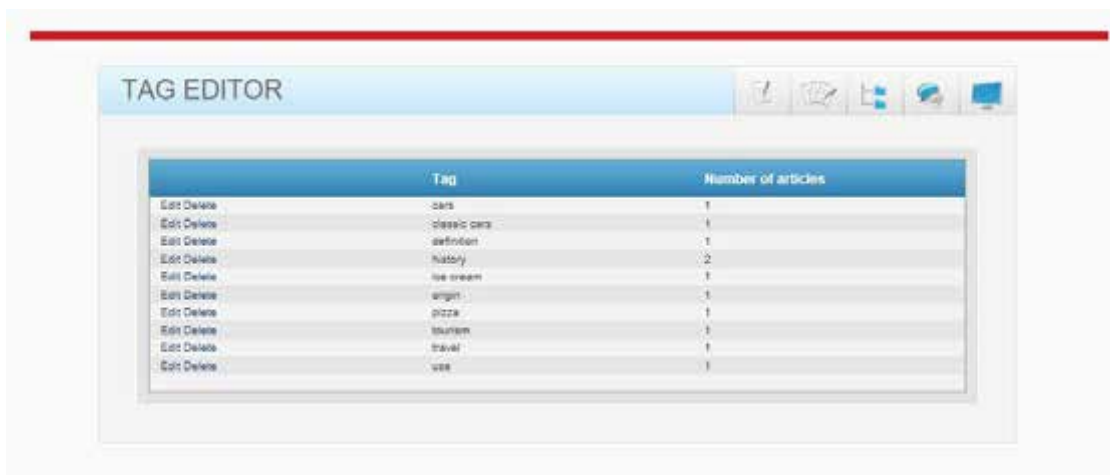

Category manager is used for creating and managing categories. A new category can be created by clicking on the pencil icon.

Category order can be adjusted by using arrows.

Number of categories and subcategories is unlimited. Each category can contain unlimited number of subcategories. The number of category levels is also unlimited.

5.7. Tags

Tag editor displays tags used in articles. It is possible to edit or delete tags from here.

5.8. Tokens

In the Token editor you can create your tokens that can be used within the EasyDNNnews module.

We create a new token by entering the name of the token into the Token title field. The token name must be placed between brackets. Ex. [token]

Enter the content of the token in the Token content field.

It is possible to insert the token into the article content or template and the token will be replaced with its content.

Token can be text, picture, video, table...

The screenshot shows the 'TOKEN EDITOR' interface. At the top, there are tabs for 'User defined tokens' and 'System tokens'. Below the tabs is a blue button labeled 'Add new token'. The 'Token title' field contains the text '[EasyDNNNewsSystemToken:SysAddThis]'. The 'Token content' field is a rich text editor with a toolbar and contains the following HTML code:

```
<!-- AddThis Button BEGIN --><div class="addthis_toolbox addthis_default_style "><a class="addthis_button_facebook_like" fb:like:layout="button_count"></a><a class="addthis_button_tweet"></a><a class="addthis_button_google_plusone" g:plusone:size="medium"></a><a class="addthis_counter addthis_pill_style"></a></div><script type="text/javascript" src="http://s7.addthis.com/js/250/addthis_widget.js#pubid=xa-4e83374938ea2808"></script>
```

At the bottom of the editor, there are buttons for 'Design', 'HTML', and 'Preview', and a 'Save token' button.

5.9. Gallery management

If the EasyDNNgallery module is installed on the portal, then it is possible to open Content Management of EasyDNNgallery module from the Dashboard.

Last added/modified galleries

Select the number of galleries per page:

- **Pizza - History & Legends of Pizza** (11/27/2011 9:56:30 PM)
- **The History of Ice Cream** (11/27/2011 8:32:41 PM)
- **What is a Classic Car?** (11/27/2011 8:14:05 PM)
- **Things to Do in United States** (11/27/2011 5:17:39 PM)
- **#News Articles - Shared gallery** (11/27/2011 3:39:49 PM)

Manage categories

User permissions:
Add user by username: Add

Using this interface it is possible to setup role permissions for the articles. It is also possible to setup permissions for an individual user.

5.11.2. Main display

2 Main display

Select article display view: Article Display

Number of posts per page: 5

Number of post columns: 1

Display layout as HTML table:

Total number of posts to display: 0

Number of pager links: 10

Show article paging:

Open details in another module instance: Select

Select article display view – select between two display options (Article display and Catalog Display)

Number of posts per page – enter the number of articles on the page

Number of post columns – enter the number of columns in which the articles will be displayed

Display layout as HTML table – layout will be display as a HTML table

Number of pager links – enter the maximum number of articles that will be displayed. If the value is 0, all articles will be displayed.

Show article paging – turn on article paging

Open details in another module instance – selection of the module instance in which the article details will be opened

5.11.3. Multi module article display

3 Multi module article display

Number of starting article: 1

Recieve global query string:

Open article links in another page. Select

Number of starting article – ordinal article number from which the display starts

Receive global query string – turn on option receive global query string

Open article links in another page – selection for opening categories, subcategories and tag URLs on the another page.

5.11.4. Category selection and article display

4 Category selection and article display

Categories to display: Display all categories.

Order posts by: Publish date Descending

Show only featured articles:

Enable article rating:

Article must be approved:

Updated article must be approved:

Author can only edit their own articles:

Categories to display – sets which categories will be displayed

Order posts by – sets the order method in which the articles will be displayed

Show only featured articles – displays only the featured articles

Enable article rating – turns on article rating option

Article must be approved – turns on Article must be approved option

Updated article must be approved – turns on Updated articles must be approved option.

Author can only edit their own articles – turns on Author can only edit their own articles option.

5.11.5. Template and theme selection

5 Template and theme selection

Article list template: BlogOne

Article list theme: List_Article_Default.htm

Article details template: BlogOne

Article details theme: Details_Article_Default.htm

Article comments theme: Comments_Default.htm

Display style: No display style

Enable theme changing in article:

Article list template – Article list template selection

Article list theme – Article list theme selection

Article details template – Article details template selection

Article details theme – Article details theme selection

Article comments theme – Article comments theme selection

Display style – Theme style selection

Enable theme changing in article – enables the change of the theme in the article

5.11.6. Article Image

The screenshot shows a settings panel titled "6 Article image". It contains the following fields and options:

- Image thumb width:
- Image thumb height:
- Proportionally resize thumb:
- Resize & crop thumb:
- Main image width:
- Main image height:
- Proportionally resize main image:
- Resize & crop main image:

Image thumb width – sets the thumbnail width in pixels

Image thumb height – sets the thumbnail height in pixels

Proportionally resize thumb – sets Proportionally resize thumb

Main image width – sets Main image width

Main image height – sets Main image height

Proportionally resize main image - turns on Proportionally resize main image

Resize & crop main image – turns on Resize & crop main image

5.11.7. Article gallery image upload

7 Article gallery image upload

Resize image on upload

Image upload width:

Image upload height:

Resize image on upload – turns on picture resize option

Image upload width – sets image upload width in pixels to which the picture will be resized

Image upload height – sets Image upload height in pixels to which the picture will be resized.

5.11.8. EasyDNNgallery integration

8 EasyDNNGalley integration

Enable gallery integration:

Gallery settings

Force default settings on all articles:

Gallery display type:

User can see only their own images:

Enable gallery integration – turns on EasyDNNnews and EasyDNNgallery integration

Gallery settings:

Force default settings on all articles – turns on the usage of default settings on all of the articles

Gallery display type – view type selection (Lightbox, video, audio)

Gallery theme – CSS theme gallery selection

Lightbox theme – Lightbox theme selection

Gallery thumb width – default thumbnail width in pixels

Gallery thumb height – default thumbnail height in pixels

Items per page – number of pictures per page that will be displayed

Number of columns – number of columns

Display item title in Lightbox – turns on Display item title in Lightbox

Display item description in lightbox – turns on Display item description in Lightbox

Display item title – turns on Display item title

Display item description – turns on Display item description

User can see their own galleries – turns on the option for the user to be able to see only their own galleries

User can see only their own images – turns the option for the user to be able to see only its own images

5.11.9. Article images tokens default preset

9 Article images tokens default preset

Insert image width: 200

Insert image token width: 200

Insert image CSS class:

Insert image inline CSS style:

Show audio video itemes in LightBox:

Display image title:

Display image description:

Resize and crop image:

- Insert image width – default image width in pixels which will be used in the generated token
- Insert image height - default image height in pixels which will be used in the generated token
- Insert image CSS class – CSS class which will be applied to the image
- Insert image inline CSS style – Inline CSS style
- Show audio video items in Lightbox – turns on video & audio file display in Lightbox
- Display image description – turns on Display image description
- Resize and crop image – turns on Resize and Crop image

5.11.10. Comments

Option	Checked
Allow comments:	<input type="checkbox"/>
Show already written comments:	<input type="checkbox"/>
Enable turn on/off comments per article:	<input type="checkbox"/>
Show comments rating:	<input type="checkbox"/>
Show threaded comments:	<input type="checkbox"/>
Comments must be approved:	<input type="checkbox"/>
Enable CAPTCHA:	<input type="checkbox"/>

Allow comments – turns on the possibility to add comments to the article

Show already written comments - turns on display of existing comments if the subsequent comment posting has been disabled

Enable turn on/off comments per article – turns on the possibility of enabling and disabling posting comments per article

Show comments rating – turns on comment rating

Show threaded comments – turns on Show Threaded comments.

Comments must be approved –turns on Comments must be approved option

Enable CAPTCHA – turns on CAPTCHA

5.11.11. Paid content

Option	Checked
Enable paid content:	<input type="checkbox"/>
Show comments for non paid viewers:	<input type="checkbox"/>
Show image gallery for non paid viewers:	<input type="checkbox"/>

Enable paid content – enables the usage of paid content

Show comments for non-paid viewers – turns on Show comments for non-paid viewers option

Show image gallery for non-paid viewers – turns on Show image gallery for non-paid viewers option

Paid content is content or part of the content that is visible only to a certain user role. Paid content is managed by using the token. For list of tokens see chapter 8..

5.11.12. Related articles and RSS

12 Related articles and RSS

Related articles

Enable related articles:

Number of related articles: 5

Sorting of related articles: Default

RSS

RSS link:

Enter url for the RSS back link:

Related articles

Enable related articles – turns on enable related articles display option

Number of related articles – number of related articles that will be displayed

Sorting of related articles – sets the sorting method of related articles

Rss

RSS link – Link to the RSS channel

Enter url for the RSS back link – enter the url for the RSS back link

5.11.13. Limited content formatting

13 Limit content formatting

Limit title length: 0

Limit summary length: 0

Limit article length: 0

Limit title length – limits the maximum title length in characters.

Limit summary length – limits the maximum length of the summary content in characters. If the value is 0, all characters will be displayed.

Limit article length – limits the maximum length of the article content in characters. If the value is 0, all articles content will be displayed.

5.11.14. SEO URL settings

14 SEO URL settings

List of characters to replace during link generation: 

Add character to list:  Old character: New character:

List of characters to replace during link generation

Old character – letter in the link that will be replaced by a new letter

New character – letter that replaces the old letter

6. ADDITIONAL MODULES

We provide several additional modules with the EasyDNNnews module:

EasyDNNnews Calendar module
EasyDNNnews Category menu module
EasyDNNnews TagCloud module
EasyDNNnews Search module

6.1. EasyDNNnews Calendar module

EDIT EASYDNNNEWSCALENDAR

Calendar settings

Show calendar archive:

Open in: Module
 Page

Show treeview archive:

Show archive in module:

Show monthly archive:

Show monthly archive in module:

Module theme:

Post day color:

Post day border color:

Post day border size:

Show calendar archive – highlights published articles in the calendar and filters articles according to their publishing date.

Open in module or page – selection of the module or the page where the filtered articles will be displayed.

Show monthly archive – displays article archive categorized on a monthly basis

Show monthly archive in module – selection of module in which the archive will be displayed

Module theme – selection of CSS theme

6.2. EasyDNNnews Category menu module

The screenshot shows the configuration interface for the 'News Category menu' module. The title is 'EDIT EASYDNNNEWSCATEGORIES'. The configuration options are as follows:

- Category menu mode:
- Select module: Module
- Select page: Page
- Module template:
- Module theme:
- Orientation:
- Show post count:
- Display all categories and subcategories
- Expand all

Buttons at the bottom: Save, Save & Close, Cancel.

Category menu module – menu type selection

Select module – selection of the module in which the results will be opened

Select page – selection of the page on which the results will be opened

Module template – selection of the menu template

Module theme – selection of the menu theme

Show post count – number of articles in category

6.3. EasyDNNnews TagCloud module

The screenshot shows the configuration interface for the 'Tag cloud settings' module. The title is 'EDIT EASYDNNNEWSTAGCLOUD'. The configuration options are as follows:

- Number of tags:
- Sorting:
- Open in:
-
- Select theme:
- Select display style:

Buttons at the bottom: Save, Save & Close, Cancel.

Number of tags – number of tags that will be displayed

Sorting – sets the method for tags sorting

Open in Module or Page – sets the module or the page where the filtered results will be displayed

Select theme – CSS theme selection

Select display style – Style selection

6.4. EasyDNNnews Search module

The screenshot shows the 'Search settings' configuration page. It includes several sections: 'Select module to open details' with radio buttons for 'Display search form' (selected) and 'Display results form'; 'Select module to open search results' with a dropdown menu set to 'News - EasyDNNNewsSearch'; 'Select module to open articles' with a dropdown menu set to 'News - EasyDNNNews'; 'Number of characters to display in result' with a text input field containing '300'; 'Select theme' with a dropdown menu set to 'BlogOne'; 'Select template' with a dropdown menu set to 'Search1.htm'; 'Select display style' with a dropdown menu set to 'Green.css'; 'Search button position' with a dropdown menu set to 'Inside search textbox'; 'Search options' with radio buttons for 'Search title', 'Search article', and 'Search title and article' (selected); and 'Highlight results' with a checked checkbox. At the bottom, there are three buttons: 'Save', 'Save & Close', and 'Cancel'.

Select module to open details – select between Search form and results display form.

Select module to open search results – selection of module in which the search results will be opened.

Select module to open articles– selection of module in which the articles will be opened.

Number of characters to display in result – number of characters that will be displayed in the result

Select theme – CSS theme selection

Select template – Template selection

Select display style – style selection

Search button position – search button position selection

Search options

Highlight results – turns on Highlighting results option

7. LOCALIZATION

7.1. Content localization

It is possible to localize news module contents to different languages. In order for the localization to become available, it is necessary to add an additional language in DotNetNuke.

Languages in DotNetNuke are managed from menu Admin > Languages.

LANGUAGE MANAGEMENT

System Default: English (United States)

Site Default: English (United States) ▼

Native Name English Name

Enable Browser Language Detection?

Update

Culture	Enabled	Edit	Static Resources		
			System	Host	Site
English (United States) **	<input checked="" type="checkbox"/>				
German (Germany)	<input checked="" type="checkbox"/>				

** - The default site language cannot be disabled

Add New Language **Install Language Pack** **Create Language Pack** **Verify Language Resource Files**

Once another language is added, it will be possible to localize contents in EasyDNNnews module.

Click on the Content localization button in order to localize the content.

EDIT ARTICLE

Title
Pizza - History & Legends of Pizza

Subtitle:
Pizza is a baked pie of Italian origin

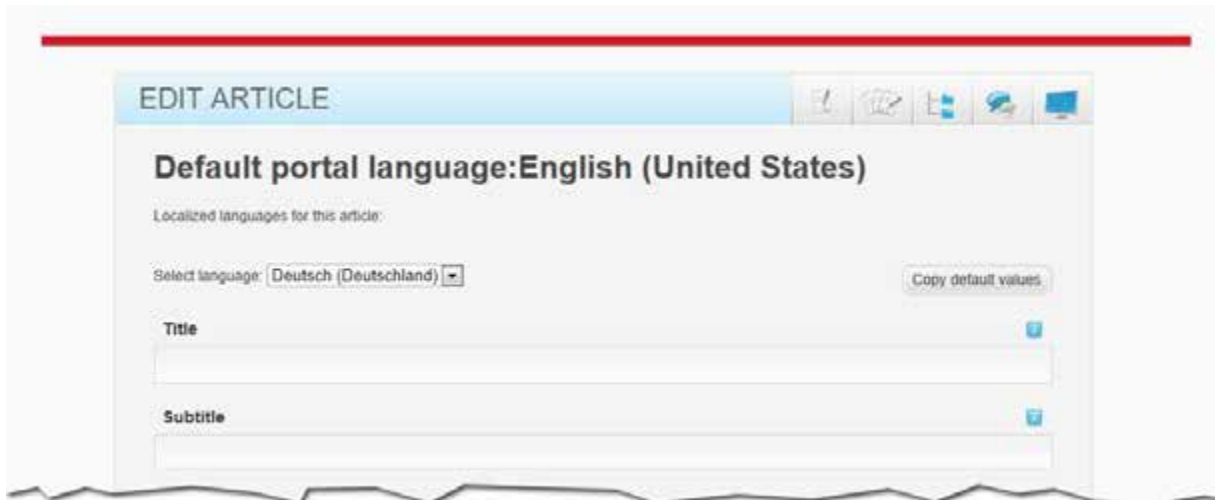

SEO settings

Categories

- Places
- Cars
- Food

Select the language from the Select Language menu and enter the content in the selected language.

All fields can be filled with already entered content in the default language by clicking on the Copy default values button. This can be useful during the direct text translation because editor can see the text that is being translated.

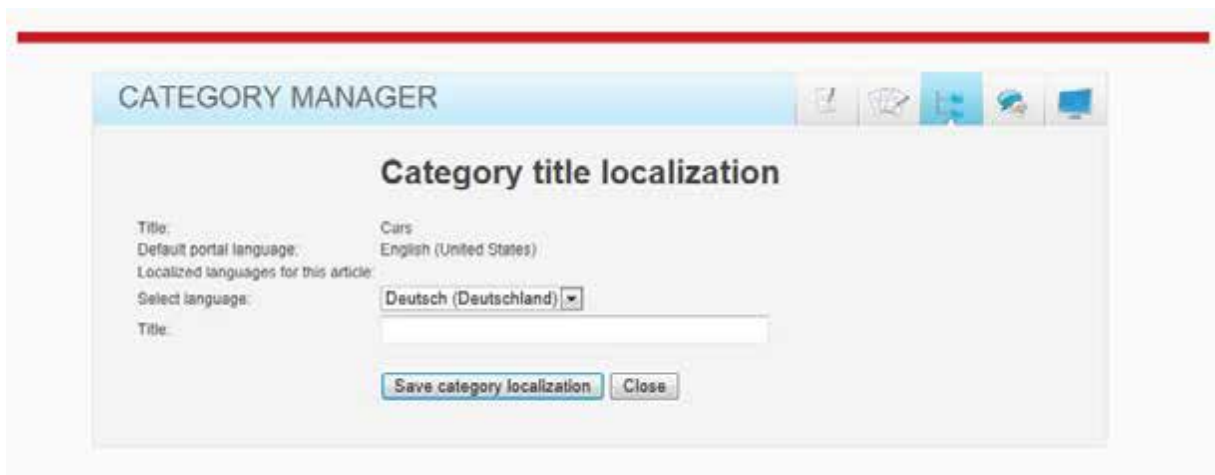

It is possible to localize categories. In Category Manager choose the category that you want to localize and click the Edit button.

Click on the Category localization button.

Choose the language that you want to localize, enter the translated value and save the values by clicking on the Save category localization button.

****Limit, Width and Height inside token have bigger priority then the values set in module settings.**

8.2. Templates and themes

EasyDNNnews display articles using HTML templates. In the HTML template you can put **TOKENS which in their places display title, subtitle, publish date, article text, article image...**

Templates are located in the folder `/DesktopModules/EasyDNNnews/Templates/`.

Templates can be organized by portals. U the folder `/Templates/_default/` are templates visible to all users of all portals. If templates are placed inside folder `/Templates/0/` then they are visible only to the users of portal 0.

8.3. Structure of Templates folder

`/Templates/(number of portal)/name of template/News/`

- here are located templates for EasyDNNnews main module. They are saved as HTML with List_ or Details_ prefix.

`/Templates/(number of portal)/nameoftemplate/Search/`

- here are located templates for EasyDNNnews Search module

`/Templates/(number of portal)/nameoftemplate/CategoryMenu/`

- here are located templates for EasyDNNnews CategoryMenu module

`/Templates/(number of portal)/nameoftemplate/StyleCSS/`

- here are located CSS from template display styles. Templates can have additional display styles. Display styles usually contain various color schemes.

`/Templates/(number of portal)/nameoftemplate/nameoftemplate.css`

- Main template CSS. It should be named same as the template.

Example how the folders for template BlogOne are organized:

`/Templates/_default/BlogOne/News/`

`/Templates/_default/BlogOne/Search/`

`/Templates/_default/BlogOne/CategoryMenu/`

`/Templates/_default/BlogOne/StylesCSS/`

`/Templates/_default/BlogOne/BlogOne.css`

8.4. Structure of HTML templates

HTML is consisting of List Article templates and Details Article templates layout.

- List Article template – contains template for displaying article in a list
- Detail Article template – contains template for displaying article details
- Comments template – contains template for displaying comments

List and Details templates are different for Article display and Catalog display.

Defined HTML templates must contain prefixes:

- For Article display:
 - List_Article_name.htm
 - Details_Article_name.htm
 - Comments_name.htm
- For Catalog display:
 - List_Catalog_name.htm
 - Details_Catalog_name.htm
 - Comments_name.htm

You can have unlimited number of list and details templates, but you must contain their prefixes (Example: List_Article_name1.htm, List_Article_name2.htm... Details_Article_noimage.htm, Details_Article_withimage.htm...).

8.4.1. List and Details HTML templates

1. List templates – displaying article in list

There are two types of displaying articles with List templates:

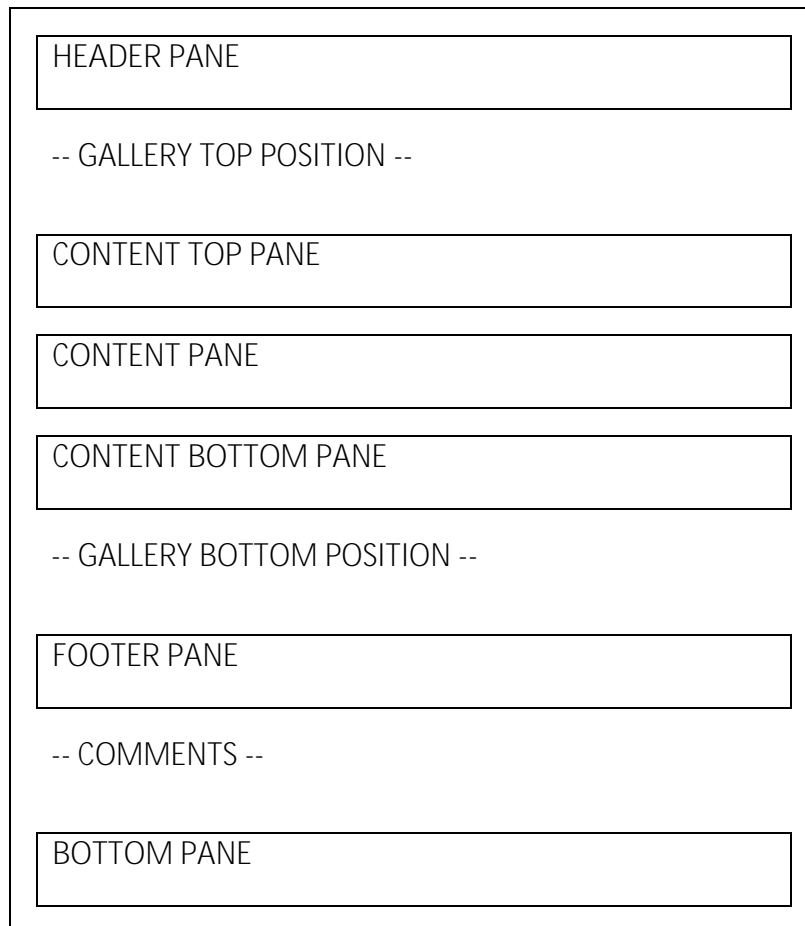

1. Displaying articles in simple mode– Articles are displayed in list, one below other. In the template is defined the display of only one article which is repeated.
2. Displaying articles in advanced mode (MultiArticleTemplate) – In this display type you create advanced article list layout which is static and does not repeat itself. You can set different order and structure of articles (Example: First article with large, title and subtitle, second and third with small image and without subtitle ...).

2. Details templates

Details template is used for displaying article details. Details template is divided into panes. Inside pane is placed HTML with tokens. For example: if you wish to add below comments social sharing buttons then the token is placed into Bottom Panel. If you wish to have title above the gallery then

the token is placed into Header pane. With this type of management there is a great flexibility in editing the details template.

Structure of panes in Details_ template:

8.5. CSS themes

CSS is saved in the template root folder /nameoftemplate/nameoftemplate.css and must be named same as template directory (Example: if the theme is called nameoftemplate, CSS must be called nameoftemplate.css. Names are case sensitive).

Based on the template name main CSS selector if defined in the CSS file: #EDN_nameoftemplate

U main CSS (nameoftemplate.css) are located styles for templates for main news module and the other modules (Calendar, Search, CategoryMenu and TagCloud). CSS classes can be called globally (available in all modules) or they can be visible only individual modules. If you wish to limit classes to individual module then you sub selector based on the module name.

Examples:

Predefined sub selectors for modules:

#EDN_nameoftemplate.news
#EDN_nameoftemplate.search
#EDN_nameoftemplate.calendar
#EDN_nameoftemplate.tagcloud
#EDN_nameoftemplate.categorymenu

Themes can have also display styles but it is not necessarily. CSS form styles are saved into folder /Styles/

#EDN_nameoftemplate is obligatory way of naming selectors.

nameoftemplate is case sensitive. If the theme title is „NameOfTemplate“ then also the selector must be #EDN_NameOfTemplate. It is different from #EDN_nameoftemplate!!!

Organization and structure of templates:

Folder: /Templates/(portal number) or _default/News

(1) List article

- (1.1) Article template (file prefix: List_Article_)
- (1.2) Article multiarticle template (file prefix: List_Article_)
- (1.3) Catalog template (file prefix: List_Catalog_)

(2) Details article

- (2.1) Article template (file prefix: Details_Article_)
- (2.2) Catalog template (file prefix: Details_Catalog_)

(3) Comments (file prefix: Comments_)

Folder: /Templates/(portal number) or _default/CategoryMenu

(4) Category (CategoryMenu) (file prefix: TemplatedMenu_)

(1.1) LIST ARTICLE - ARTICLE TEMPLATE

```
<!--ArticleRepeat: Before: -->Header of template - no repeat<!--RepeatEnd: Before: -->
```

```
<!--ArticleTemplate--><!--ArticleEnd -->
```

```
<!--ArticleRepeat: After: --> Footer of template - no repeat<!--RepeatEnd: After: -->
```

(2. 1) DETAILS ARTICLE - ARTICLE TEMPLATE

```
<!--ArticleTemplate-->
<EDNHeader></EDNHeader>
<!--Gallery TOP position-->
<EDNContentTop></EDNContentTop>
<EDNContent></EDNContent>
<EDNContentBottom></EDNContentBottom>
<!--Gallery BOTTOM position-->
<EDNFooter></EDNFooter>
<!--Comments position-->
<EDNBottom></EDNBottom>
<!--ArticleEnd-->
```

(1. 3) LIST ARTICLE - CATALOG TEMPLATE

```
<!--CatalogArticleTemplate-->
<!--BreadcrumbTemplate--><!--BreadcrumbEnd-->
<!--CatalogArticleEnd-->
```

```
<!--CatalogArticleTemplate-->
<!--HeaderTemplate--><!--HeaderEnd-->
<!--CatalogArticleEnd-->
```

```
<!--CatalogArticleTemplate-->
<!--CategoryTemplate--><!--CategoryEnd-->
<!--CatalogArticleEnd-->
```

```
<!--CatalogArticleTemplate-->
<!--ArticleTemplate--><!--ArticleEnd-->
<!--CatalogArticleEnd-->
```

(2. 2) DETAILS ARTICLE - CATALOG TEMPLATE

```
<!--CatalogArticleTemplate-->
<!--BreadcrumbTemplate--><!--BreadcrumbEnd-->
<!--CatalogArticleEnd-->
```

```
<!--ArticleTemplate-->
<EDNHeader></EDNHeader>
<!--Gallery TOP position-->
<EDNContentTop></EDNContentTop>
<EDNContent></EDNContent>
<EDNContentBottom></EDNContentBottom>
<!--Gallery BOTTOM position-->
<EDNFooter></EDNFooter>
<!--Comments position-->
<EDNBottom></EDNBottom>
<!--ArticleEnd-->
```

(1. 2) LIST ARTICLE - ARTICLE MULTIPARTICLE TEMPLATE

```
<!--MultiArticleTemplate-->
<!--ArticleRepeat: Before: --><!--RepeatEnd: Before: -->
<!--MultiArticleEnd-->
```

```
...
<!--MultiArticleTemplate-->
<!--ArticleRepeat: 1: --><!--RepeatEnd-->
<!--MultiArticleEnd-->
```

```
<!--MultiArticleTemplate-->
```

```

<!--ArticleRepeat: 2: --><!--RepeatEnd-->

<!--HeaderTemplate--><!--HeaderEnd-->
<!--CategoriesEnd-->

<!--CategoriesTemplate-->
<!--TemplateLevel: 0--><!--TemplateEnd-->
<!--CategoriesEnd-->

<!--CategoriesTemplate-->
<!--TemplateLevel: 1--><!--TemplateEnd-->
<!--CategoriesEnd-->
...

<!--CategoriesTemplate-->
<!--FooterTemplate--><!--FooterEnd-->
<!--CategoriesEnd-->

```

8.6. Multi-article template feature

One of main features of EasyDNNnews is article display ability. Besides standard display (displaying one article below other), it is possible to use advanced Multi-Article templates with different article layout look and options.

Multi-article template consists of se pane ArticleRepeat in which you place number of article which will be displayed inside this repeater. You can place multiple articles inside one repeater depending on layout.

Example of Multiarticle template:

```

<!--MultiArticleTemplate-->
<!--ArticleRepeat: Before: -->Header of template - optional<!--RepeatEnd: Before: -->

```

```

<!--MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat: 1: --><HTML with tokens for article 1/><!--/RepeatEnd-->
<!--/MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat: 2: 4: --><HTML with tokens for article 2/><HTML with tokens for article
4/><!--/RepeatEnd-->
<!--/MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat: 3: 5: --><HTML with tokens for article 3/> <HTML with tokens for article
5/><!--/RepeatEnd-->
<!--/MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat: 6: 7: 8: 9: 10: 11: 12: 13--><HTML with tokens for article 6/> <HTML with tokens
for article 7/><HTML with tokens for article 8/><HTML with tokens for article 9/><HTML with
tokens for article 10/><HTML with tokens for article 11/><HTML with tokens for article
12/><HTML with tokens for article 13/><!--/RepeatEnd-->
<!--/MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat: After: --> Footer of template - optional <!--RepeatEnd: After: -->
<!--/MultiArticleEnd-->

```

<!--MultiArticleTemplate-->
<!--ArticleRepeat:1:-->

<!--RepeatEnd-->
<!--MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat:2:4-->

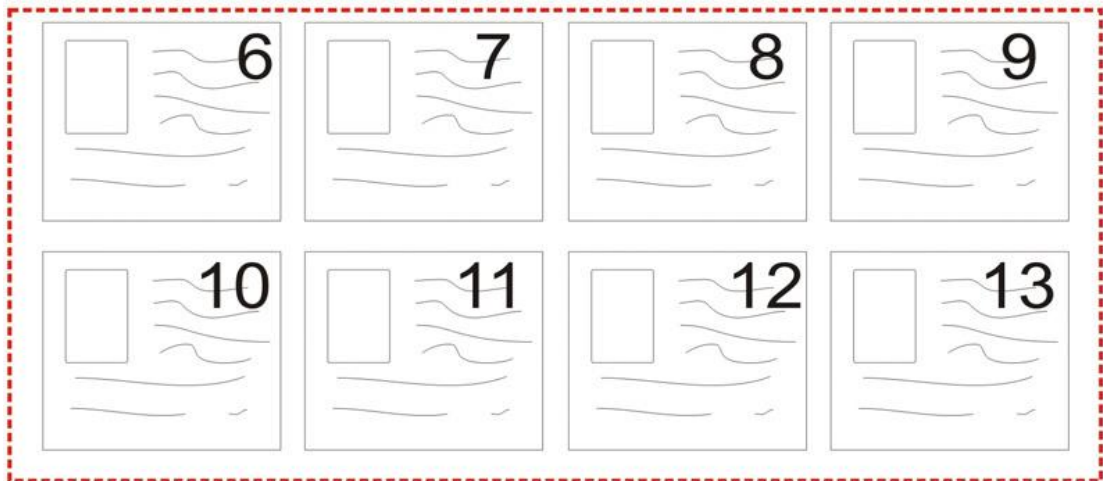

<!--RepeatEnd-->
<!--MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat:3:5-->

<!--RepeatEnd-->
<!--MultiArticleEnd-->

<!--MultiArticleTemplate-->
<!--ArticleRepeat:6:7:8:9:10:11:12:13-->

<!--RepeatEnd-->
<!--MultiArticleEnd-->

8.7. Multi instance module feature

With EasyDNNnews it is possible to have multiple module instances on one page it is possible to achieve the same result as Multi-article template. You need to place module on the page and in the u *Module Settings > Multi module article> Number of starting article* set the number from which articles are displayed.

Example: On the page there are 3 module instances. In the first instance we want to show 1 article in the second 3 and in the third 5 articles. For first instance we must set starting article 1, for the second we must set the starting article 2 and for the third instance we must set the starting article to 5 because the first 2 instances already show 4 articles.

Connecting multiple module instances to work as one

To connect multiple modules instances on the same page to work as one during category changes you need to turn option to receive global values in the settings: *Module Settings > Multi module article feature> Receive global query string*

In the helper modules you need to turn on option page on which we want to send global values.

Difference between Multi-article template feature and Multi instance module feature?

Multi-article template enables advanced design and better performances. Multi instance module feature enables placing multiple module instances on the page with selection of repeating selected layout. With Multi-article template features number of articles that appear on the page is set in the template and in the settings. With multi instance feature this is not condition and the number of articles on the page is set in settings.
